

## **WEB PAGE DEVELOPMENT ENVIRONMENT THAT DISPLAYS FREQUENCY OF USE INFORMATION**

### **ABSTRACT OF THE DISCLOSURE**

5       A web page development environment includes a link disambiguator that assures  
each link in a web page may be uniquely identified in an access log. An editor reviews  
the access log and displays a web page in a manner to visually indicate how often certain  
portions of the web page are used in certain ways. For example, links are highlighted to  
visually indicate their frequency of use. In addition, text within a web page that was used  
as a search term to find the web page is highlighted. Note that the highlighting may  
10   include any suitable visual indication of frequency of use.
